Supportive Obstetrics Y/N

SIPMs available at this unit:

SIPM Clinical Research

SIPM Leadership & Management

SIPM Medical Education

We are currently **unable** to provide the following training opportunities (please list)

AS ABOVE

Free text comments

North Manchester General Hospital has been a part of Manchester University Foundation NHS Trust since 2020 and we are recently seeing a lot of new services which are providing training opportunities for both Specialty trainees and GP trainees coming to work here.

The team of Consultants led by our Clinical Director Dr Swapna Patankar consists of mix of skills and experience with special interest in different areas. More importantly all Consultants are very supportive of the trainees and keen to help them progress in their career.

We now have more cross site training facilities being part of MFT and therefore can support particular SITMS in senior trainees if they choose to come here.

For trainees interested in maternity based SITMs , the unit caters to women with high risk complex problems and high deprivation index and it would be a good learning opportunity for you to manage these cases .

From Gynaecology SITM point of view we can definitely support the ones mentioned above.

The rota would facilitate protected SITM session so that you complete training within the stipulated time and achieve the competences required for these SITMS.

I would like to add a testimony written by one of our ST4 trainee describing her experience of working > 12 months at NMGH

“ NMGH is a small but busy, friendly unit with consultants who are really keen to see trainees progress and succeed. Due to the local population make-up there is a lot of interesting pathology which may not be seen at other units. The link with MFT is useful as it means you have access to specialist clinics at St Marys if needed for training. There are regular operating lists and trainees are encouraged to develop their skills surgically. “

ST4 trainee @ NMGH
